INSTALLATION INSTRUCTIONS

Tag is designed to be attached on metallic license plate

Fixing procedure:

1. Make 3,3 - 3,4 mm hole to the license plate
2. Add thin layer max 0,5mm) of silicone sealant or adhesive on two locations of the tag backside like shown in picture below. Sealant will both help the attachment process and it will prevent possible vibrations caused by resonances in vehicle. In long term, such vibrations can cause tag attachment to loose and eventually RFID-tag may fall off. Sealant can be silicon, epoxy or other elastic adhesive material.

Adhesive locations

3. Place the tag firmly on the correct location on the plate and attach it with 3,2 mm / 6 mm pop rivet. Choose the rivet material according to license plate to avoid rivet corrosion. Rivet will not be visible from the front of the tag.
